INTRODUCTION

The Rhode Island Executive Office of Health and Human Services (EOHHS) requested that HealthCare Analytics calculate actuarially sound rates, for contracting purposes, for the Medicaid portion of expenses of certain and specific segments of the dually eligible, Medicare & Medicaid Eligible (MME) beneficiaries. In addition, EOHHS also requested actuarially sound rates reflecting comprehensive medical services for Medicaid Only (MA Only) Long Term Services and Supports (LTSS) beneficiaries. These efforts are part of the State's Integrated Care Initiative (ICI), information for which can be found in the appendix of this document, to address the complex medical needs of the State's MA Only LTSS and MME populations. The program set to address said populations will be referred to as Rhody Health Options.

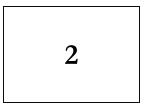

This document presents the approach and calculation of the Rhody Health Options (RHO) per member per month (PMPM) capitation rates effective for the Rate Period July 1, 2014 through June 30, 2015, for the purpose of attaining rate approval from CMS under 42 CFR 438.6(c), and which were made consistent with the guidance provided in the Centers for Medicare and Medicaid Services (CMS) Rate Checklist. <u>The Rates presented in this Data Book should be considered provisional, subject to and pending CMS review and approval.</u>

The rates were developed from existing claims data for the target populations, which were adjusted, smoothed and trended to the rate period. Adjustments were made to account for programmatic changes that will impact future claims. Such changes include the impact of **R.I.G.L. 40-8-13.4 "Article 19 As Amended" of the FY 2014 Appropriations Act,** referred here to as "Article 19." The claims were trended forward to the rate period using the indicated trends in the claims experience, smoothed for non-repetitive occurrences such as certain negative price or utilization trends, and adjusted with an estimate of the impact from Article 19. Finally, administrative (including profit and contingency), State premium tax and ACA Issuer tax loads were included, as applicable, to develop actuarially sound capitation rates. Exhibits supporting the calculations for the rate development and adjustments related to programmatic changes are shown in tables throughout this document and as attached in the Exhibits section.

We relied on data and analysis produced by EOHHS and its subcontractors for the historical claims experience of the eligible beneficiaries for enrollment in Rhody Health Options, and for the data related to the historical transitions and migration patterns between (a) Long Term Care / Nursing Home (LTC) beneficiaries and (b) Home and Community Based (HCBS/Waiver) recipients. The latter, transition/migration analysis, formed the basis upon which the program initiatives and target enrollment mix were established.

The Rhody Health Options capitation rates were developed with guidance and assistance from Airam Actuarial Consulting LLC and Donlon & Associates, Inc. Donlon & Associates also provided the certification letter as per CMS and State requirements.

With respect to the State's Integrated Care Initiative, this data book and the rates presented within are applicable to phase I of EOHHS' approach to improving the Medicaid program and are set on a 12-month basis. Phase II, when implemented, is anticipated to be part of the demonstration project with CMS to integrate the care of the dually eligible Medicare & Medicaid beneficiaries. Further information regarding the State's ICI program and its phases can be found in the appendix of this data book. Note, however, that should the State participate in the said demonstration project, it is anticipated that the effective period will begin April 1, 2015, and consequently these rates will need to be recast for the resulting revised rate period.

CAPITATION RATES AND DEMOGRAPHICS

The **provisional** capitation rates, subject to CMS review and approval, including administrative, profit, contingency and tax loads (as applicable to non-profit and for-profit plans) for the rate period 7/1/2014 - 6/30/2015 are as follows:

RATE DEVELOPMENT METHODOLOGY

Claims & Enrollment Data

Claims and enrollment data was provided by EOHHS and its subcontractors on behalf of the State which we used to develop the capitation rates exhibited in the above Table 1. The data and analysis was based on encounter and fee-for-service experience and recipients, for In-Plan and Out-of-Plan services, for the following beneficiaries:

MME Population / Rate Cell:

- MRDD
- SPMI
- Community (Non-LTSS)
- LTC (>90 days in Nursing Home)
- Waiver (LTSS Community)

MA Only Population:

• LTSS (LTC and Waiver beneficiaries)

The claims data was delineated by type of service detail, and was for the periods July 1 through June 30 for the State Fiscal Years (SFY) ending in 2010, 2011, 2012 and 2013. The claims were presented on an incurred basis, paid through November 2013, estimated 100% complete.

The membership history was reported and analyzed for the same periods and same target populations (see Table 2). We relied upon the accuracy of the data provided by EOHHS and its subcontractors for our analysis and capitation rate development.

Trends

<u>MME Populations / Rate Cells</u>: We examined year-over-year and multi-year average trends for each rate cell from SFY 2010 through SFY 2013 and observed that there were wide variances in the trends within the rate cells. To smooth out these variances we developed a blended average trend, adjusted for the relative weight of the rate cells contributing to a specific service category trend. Negative price and utilization trends were disallowed where they did not offset each other and where they resulted in negative PMPM trends. Lastly, the composite trend for each rate cell was calculated using the rate cell's SFY '13 distribution of service category PMPMs. The steps, as discussed, were as follows:

- 1. Calculate the two-year average trend by major service category for the total MME population for SFY 2013 over SFY 2011
- 2. Weigh individual service category trends by the rate cells that contribute greater than 60% of the service category trend i.e., use LTC rate cell's Outpatient and Institutional service category trends as the trend for all Outpatient and Institutional services, and Waiver rate cell's Waiver service category trend for all Waiver services
- 3. Disallow negative trends where the PMPM trend in any service category is negative e.g., set the negative price and/or utilization trend to 0% if the PMPM trend is negative and if the price and utilization trends do not appear to offset each other
- 4. Apply the impact of Article 19 (R.I.G.L. 40-8-13.4) on the price (cost per utilization) trends for Inpatient and Outpatient services from the base period to the rate period
- 5. Calculate the composite trend for each rate cell based on each rate cell's SFY 2013 service category PMPM distribution

² Where indicated composite PMPM trends are negative and price and utilization trends do not offset each other, we assumed 0% for the corresponding negative price and/or utilization trend

³ Substituted trends for Cost/Util with estimated CMS Market Basket Less Productivity Index Rates for Inpatient and Outpatient, as per Article 19 (R.I.G.L. 40-8-13.4), as applicable to In-State expenses

<u>MA Only LTSS rate cell</u>: Since the MA Only population is small and not credible, we blended the experience of the MME (Duals) with the MA Only experience to derive the trends for MA Only. Since Institutional and Waiver expenses are primarily concentrated in the LTC and Waiver populations, respectively, the selected trends were that of the blended MA Only & MME LTC for institutional category, the blended MA Only and MME Waiver for the waiver category. As in the MME trend development above, negative trends were disallowed in any service category where the PMPM trend was negative and the price and utilization trends did not appear to offset each other. The impact of Article 19 (R.I.G.L. 40-8-13.4) was applied to Inpatient and Outpatient services for the rate period's cost/utilization (price) trends. Lastly, the MA Only rate cell's SFY 2013 service category PMPM distribution was applied to develop the overall trend for MA Only LTSS.

	18	align with Medicare payments for similar services from the prior federal fiscal year. With respect
	19	to the outpatient rate, (i) it is required as of January 1, 2011 until December 31, 2011, that the
	20	Medicaid managed care payment rates between each hospital and health plan shall not exceed one
	21	hundred percent (100%) of the rate in effect as of June 30, 2010. Negotiated increases in hospital
	22	outpatient payments for each annual twelve (12) month period beginning January 1, 2012 may
	23	not exceed the Centers for Medicare and Medicaid Services national CMS Outpatient Prospective
	24	Payment System (OPPS) hospital price index for the applicable period.; (ii) provided, however,
	25	for the twelve (12) month period beginning July 1, 2013 the Medicaid managed care outpatient
	26	payment rates between each hospital and health plan shall not exceed the payment rates in effect
	20	payment rates between each hospital and near pian shan not exceed the payment rates in effect
	20	as of January 1, 2013; (iii) negotiated increases in outpatient hospital payments for each annual
	27	as of January 1, 2013; (iii) negotiated increases in outpatient hospital payments for each annual

Base Period Data

To develop PMPM capitation rates for each rate cell, we developed medical expense PMPM estimates for the Rate Year by projecting the Selected Base Period PMPMs for each target population forward using the selected trend factors.

State Fiscal Years (SFY) 2010 through 2013 were reviewed for consistency and credibility and the following decisions were made with respect to the selections of the base period. For each MME target population and MA Only LTSS population, SFY 2013 was selected as the Base Period PMPM (see Table 4).

¹ The selected Base Period PMPMs is set at the actual SFY '13 experience for the MME and MA Only populations

Care Management Savings Estimate

A range of care management savings were estimated on the assumption that health plans will achieve better outcomes within each rate cell through their care management and best practice initiatives than the traditional fee-for-service system. The goal is both enhanced preventive services and an appropriate shift of services from institutional setting to community and office-based setting. The summary estimates are presented below, and a more detailed analysis can be found in Exhibit 5a.

Table 5a

Care Management Savings - MME Population

¹ Care Management savings adjustment factors developed with the assistance of Airam Actuarial Consulting, LLC, Donlon & Associates, Inc. and RI-EOHHS

For the MA Only LTSS population, the care management savings estimates were adjusted to reflect a portion of the rate cell (Waiver beneficiaries) where services are currently covered under a managed care contract, and for which care management savings are assumed to be reflected in the experience. The summary estimates are presented below, and a more detailed analysis can be found in Exhibit 5b.

Program Initiatives

Program savings were identified from initiatives related to the transition and/or migration of the MME beneficiaries to the most appropriate setting for their particular service needs. These initiatives are based on the assumption that health plans will best meet the needs of the MME beneficiaries through their care management and best practice protocols, and have a favorable impact on the rates of transitions and migrations by enhancing and strengthening transitions into home and community based services and away from institutional settings. Table 6 below displays the estimates of program initiatives to affect the mix in the LTC & Waiver populations through interventions in transitions and migrations.

Although separate PMPM capitation rates are developed for the LTC and Waiver populations, payments to health plans will be a blended rate of the LTC and Waiver rates, based on the monthly original enrollment assignment mix for each health plan, adjusted for the targeted mix from the program initiatives. This concept is further discussed below and illustrated in Table 8:

Table 6

Adjustment for Program Changes

Generics First Rx Program – Drug cost estimates for the MME and MA Only populations are primarily based on FFS experience. As such, we anticipate that under a managed care plan the drug expense will reflect certain savings as a result of higher generic substitutions and through the effective use of formularies. To account for these potential savings in the projected expenses, we analyzed the SFY '13 drug expenditures by rate cell and developed estimates for savings as a ratio of total SFY '13 expenses, to be applied to the projected PMPMs in the rate development.

Fraud & Abuse – The additional provisions for healthcare compliance as contained in the RHO contract, and the healthcare compliance programs as mandated by the Healthcare Reform Law of the Patient Protection and Affordable Care Act (PPACA) of 2010 are expected to produce additional savings in the healthcare system. In anticipation, an adjustment was applied to recognize such savings at a moderately low level of 1.0% of claims for the rate period ending 6/30/2015, as Fraud & Abuse prevention and recovery programs are newly introduced or existing ones better implemented.

Administrative Load & Premium Tax

With guidance from Airam Actuarial Consulting LLC, the administrative & contingency load (including profit) for the rate period 7/1/2014 - 6/30/2015 rates for the MME populations were set at 6% to 10% of the projected capitation rate PMPMs, with greater emphasis on the Waiver rate cell, in anticipation of greater care management efforts required for this population with respect to the program initiative discussed above. Administrative & contingency load (including profit) for the MA Only rate were set to achieve a comparable PMPM as compared to the MME LTC / Waiver rate cell. The capitation rates for the rate cells were also loaded for the 2% RI State Premium Tax. Additionally, For-profit plans' rates were loaded for an estimate of the ACA Issuer tax at a rate of 2% on non-nursing home and non-waiver expenses.

The Issuer tax rate was previously estimated by United Healthcare of New England and it represents the maximum liability for the State. The State will require a settlement for a refund based on actual Issuer Tax incurred by the For-Profit health plan(s); should the actual Issuer Tax be less than the estimate provided for in these rates.

Summary – Rate Development

In summary, the selected base period PMPMs for each population cohort were trended at their respective selected trends, adjusted for the estimated impact of R.I.G.L. 40-8-13.4 "Article 19 As Amended." The PMPMs were further adjusted for anticipated care management initiatives, program initiatives as applicable to the blended MME - LTC/Waiver rate cell, as well as the anticipated impact of PPACA's healthcare compliance – Fraud & Abuse mandate. The resultant PMPMs were then loaded for administration, RI State premium tax, and ACA Issuer tax as applicable to for-profit plans. Table 7 below presents the rates on a "summary" level, and a more detailed work-up of the rate development is presented in Exhibit 7 in the exhibits section of this data book.

LTC/Waiver Rate Cell Payment Blending Methodology

While separate PMPM capitation rates are developed for the LTC and Waiver populations, payments to health plans will be a blended rate of the LTC and Waiver rates, based on the monthly Original Assignment enrollment mix for each health plan, adjusted for the targeted mix from the program initiatives. The methodology for the blended rate calculation and the monthly adjustment is illustrated below in Table 8a and Table 8b:

The steps for determining Original Assignment enrollment and the calculation of the blended rate will be as follows:

- 1. Original Assignment enrollment = assignment of Eligibles into either the LTC or the Waiver cells, with an accounting of:
 - a. New enrollees

- b. Disenrollment of members no longer eligible for either the LTC or the Waiver cells Note: Although it is anticipated that there will be transfer of members from the LTC cell to the Waiver cell (or vice versa), the resulting effect on the "Census" for each cell will not be considered in the determination of Original Assignment Enrollment for the purpose of calculating the blended capitation rate
- 2. Calculate the Original Assignment enrollment (Pre-Intervention) mix of step 1 above
- 3. Apply Target Intervention Factor to derive the Post-Intervention target enrollment mix for LTC and Waiver
- 4. Calculate the blended capitation rate of LTC/Waiver, based on the Post-Intervention target enrollment mix determined in step 3 above

Table 8a displays calculation of the blended rate cell for Month 1 under various examples of enrollment mix, while Table 8b displays calculation of the blended rate cell for multiple months under various enrollment scenarios for the LTC and Waiver cells.

Actuarial Certification

Certification of the Rhody Health Options capitation rates for the rate period 7/1/2014 - 6/30/2015 is provided under a separate cover by the actuarial firm of Donlon & Associates, Inc., in support of this data book.

APPENDIX

THE STATE'S ICI PROGRAM

- As excerpted from the procurement / plan documents to provide further information.

EOHHS and stakeholders recognized that there is an opportunity to improve the Medicaid program by enhancing the integration of all services required by [ABD] Medicaid recipients including primary care, acute care, specialty care, behavioral health care and long-term services and supports and to include those individuals who are Medicare and Medicaid eligible in those integration efforts. These populations have complex medical conditions, require a multi-disciplinary care of care and supports, and are costly to serve. It is not surprising therefore that the Integrated Care Initiative (ICI) focuses on these populations.

In 2010, the ACA recognized the needs of these population groups and promoted the coordination of services for adults with disabilities (ages 19 to 64) and to elders (age 65 and older). In July 2011, the RI General Assembly also recognized the importance of improving the systems serving these populations:

By joint resolution pursuant to Rhode Island General Laws relating to the Medicaid Reform Act; Section 3 of Article 16: Integration of Care and Financing for Medicare and Medicaid Beneficiaries, the Executive Office of Health and Human Services is directed to engage in a contractual arrangement for the expansion and integration of care management strategies by July of 2012 for Medicaid-only beneficiaries and MME Members.

As a result, the ICI was established.

The vision of the State is to have an Integrated Health Care System for all Medicaid-only and MME Members that will achieve improved health and well-being, better healthcare, at lower costs. EOHHS's mission is to transform the delivery system through purchasing a person-centered, comprehensive, coordinated, quality health care and support services that promote and enhance the ability of Medicaid-only and MME recipients to maintain a high quality of life and live independently in the community.

A key requisite to meet the State's vision and mission for the ICI is to build on, improve, and integrate the current Care Management programs to better meet the needs of the target populations. The goals of ICI are the following:

- Enhance person-centered care
- Improve and maintain Member's quality of life and care
- Develop an integrated system of care and coordination of services
- Increase the proportion of individuals successfully residing in a community setting
- Reduce long term care costs by providing person-centered care in the most appropriate and cost-effective setting
- Decrease avoidable hospitalizations, emergency room utilization and reduce nursing home admissions and length of stay

EOHHS's ICI is founded on a care philosophy to ensure that services are delivered in the most appropriate care setting for each Member based on their medical, behavioral health and social service needs. This philosophy incorporates CMS' tenets of Managed LTSS:

- **Person-driven:** The system affords older people, people with disabilities and/or chronic illness the opportunity to decide where and with whom they live, to have control over the services they receive and who provides the services, to work and earn money, and to include friends and supports to help them participate in community life.
- Inclusive: The system encourages and supports people to live where they want to live with access to a full array of quality services and supports in the community.
- Effective and Accountable: The system offers high quality services that improve quality of life. Accountability and responsibility is shared between public and private partners and includes personal accountability and planning for long term care needs, including greater use and awareness of private sources of funding.
- **Sustainable and Efficient:** The system achieves economy and efficiency by coordinating and managing a package of services that are appropriate for the beneficiary and paid for by the appropriate party.
- Coordinated and Transparent: The system coordinates services from various funding streams to provide a coordinated, seamless package of supports, and makes effective use of health information technology to provide transparent information to consumers, providers and payers.

• **Culturally Competent:** The system provides accessible information and services that take into account people's cultural and linguistic needs.

In order to achieve the goal of full integration (primary care, acute care, specialty care, behavioral health care and long term services and supports), the State will contract with two or more MCOs to provide the comprehensive array of primary care, acute care, specialty care, behavioral health, and long-term care services and supports to Medicaid-only adults who receive LTSS as well as to MME individuals who are eligible for full Medicaid benefits, under a capitation arrangement. The target populations for this procurement fall into four groups: (1) MMEs living in the community receiving no long-term care services or supports, (2) MMEs living in the community receiving long term care services and supports, (3) MMEs living in an institutional care setting, and (4) Medicaid-only adults who receive LTSS in a nursing home or in the community.

This initiative will be implemented in two phases.

The Medicaid ICI represents **Phase I** of EOHHS's approach to improving the Medicaid program by enhancing the integration of the full range of services (primary care, acute care, specialty care, behavioral health care and long-term services and supports) for all Medicaid eligible adults, importantly including persons who are dually eligible for Medicaid and Medicare. Additionally, as described below, certain services for individuals with developmental disabilities and individuals with severe and persistent mental illness will not be included in Phase I.

Phase II includes the provision of all Medicaid covered benefits to the Medicaid only adults who receive LTSS and to all full benefit MMEs population, except for those individuals who are specifically excluded from this initiative. Phase II includes the provision of all Medicaid benefits and Medicare benefits to the Medicaid only and to dually eligible Medicaid and Medicare individuals.

D&A Donlon & Associates, Inc.

STATEMENT OF ACTUARIAL OPINION

I, Thomas M. Donlon, am associated with the firm of Donlon & Associates, Inc. I am a Member of the American Academy of Actuaries and meet its General Qualification Standards to issue public statements of actuarial opinions, which include the development of capitated rates for state Medicaid programs. I have been involved in developing the State capitation rates for specific segments of the SSI population under Rhode Island's Medicaid program called Rhody Health Options (RHO) for the 12-month period July 1, 2014 through June 30, 2015. These efforts are part of the State's Integrated Care Initiative (ICI) to address the complex medical needs of the Medicare & Medicaid Eligible (MME) Aged, Blind and Disabled Adult (ABD) population and the Medicaid Only (MA Only) Long Term Services and Supports (LTSS) beneficiaries. Capitation rates were developed for the following eligibility categories:

MME Population:

- Long Term Care (LTC) Greater than 90 days in Nursing Home
- Mental Retardation and Developmental Disabilities (MRDD)
- Waiver (LTSS Community)
- Serious and Persistent Mental Illness (SPMI)
- Community (Non-LTSS)
- MA Only Population:
 - LTSS (LTC and Waiver beneficiaries)

I have examined the actuarial assumptions and actuarial methods used in determining the capitated payment rates as developed in the attached HealthCare Analytics report dated May 14, 2014. In my review of the capitation rate development, I have relied upon an analysis of Managed Care Encounter data, Medicaid Fee-For-Service claims data, Medicaid eligibility data, program and other documentation, and trend research provided by HealthCare Analytics to the State. All data was provided to the State Medicaid Agency. I performed no verification as to the accuracy of these data. In other respects, my determination included such review of the actuarial calculations as I considered necessary in the circumstances.

In my opinion, the capitation rates developed in the report dated May 14, 2014:

- 1) Are computed in accordance with commonly accepted actuarial standards consistently applied and are fairly stated in accordance with sound actuarial principles,
- 2) Are based on actuarial assumptions which reflect historical program experience, and
- 3) Are in compliance with the regulations found at 42 CFR 438.

Actuarial methods, considerations and analyses used in forming my opinion conform to the appropriate Standards of Practice as promulgated from time to time by the Actuarial Standards Board.

Thomas M. Donlon, FSA, MAAA Consulting Actuary
